Introduction

The Doctor Appointment Management System is a web-based application developed to simplify and automate the process of booking doctor appointments. It provides an online platform that connects patients, doctors, and administrators in an efficient manner. The system aims to reduce manual work, save time, and improve healthcare service management.

Software specification:

- Front-end: HTML, CSS, JavaScript framework.
- Back-end: PHP.
- Database: MySQL.

Hardware specification:

- Standard server with ~4 GB RAM.
- Multi-core CPU, SSD storage; client machines with browser access.
